

SYSTEM FOR PROVIDING ONLINE SERVICE REPORTS**ABSTRACT OF THE INVENTION**

[0101] A system for providing online service reports to user subscribers. The service reports contain service information about services rendered by one or more service providers operating at the direction of a service administrator. The system includes a service hub coupled between the service administrator and the one or more service providers. The service hub receives an access message that defines access rights for the user subscribers. A decoder decodes the service information from one or more operational messages exchanged between the service administrator and the one or more service providers. A network server is coupled between the service hub and the user subscribers via a communication network. The network server receives a request from a selected user subscriber, and in response, provides at least a portion of the selected service information to the selected user subscriber based on the access rights.
